## Lumi Collect is a wallet for collectibles & game assets

Lumi Collect supports collectibles & game assets based on Ethereum and ERC721 tokens

ERC721 tokens are non-fungible assets and that is their main difference from ERC20 tokens. Each ERC20 token is equal in value to another ERC20 token, while each ERC721 token is unique with all its own traits written on the Blockchain.

We consider Lumi Collect to be the first 'real' app for collectibles, contrary to the apps whose work is based on built-in browsers.

### What can Lumi Collect do now?

Display all collectible assets associated with your Ethereum address in My Collection tab.

Display all your ETH and oken activity.

### What are we going to do?

Our next release will let Lumi Collect sign all the smart contracts transactions with a mobile ETH wallet. When you press "Pay" on a Dapp website – for example, to breed your kitties or to send a spaceship on a mission, the app opens and you sign a transaction securely.

We'll most likely add a marketplace for tokens.

Token ownership history and the prices paid.

We might enable smart contract functions inside the app – breed, gift, etc.

### How are we going to earn money?

Sell ad slots for new games that would like to be promoted in the "Explore" tab.

Maybe we'll come up with some other options :-)

## Frequently Asked Questions that explain it all

### Do you support all of the existing ERC721 tokens? What if I have some ultimately rare tokens?

– It's the same as with ERC20 tokens: if a token is listed in the wallet, you can see it in the app and manage it. If it's not, the token is still stored safely on your ETH address, but you won't be able to see it in the app.

### Are your functions for Collectible assets similar to those of Metamask?

– In the near future, yes. Also, with all due respect, we consider an app solution more secure than the Web extension one.

## Collectibles currently available

CryptoKitties

Blockchain Cuties

OxUniverse

## Getting ready...

Mycryptons

EtherQuest
